The collection of topics in this volume reflects the diversity of recent advances in chemistry and physics of engineering materials with a broad perspective that will be useful for scientists as well as for graduate students and engineers. This new book presents leading-edge research from around the world. Topics in the book include: • Methods for the quality of gas-filled polymer materials. • Radiometric measurements deposits of surface water. • Hydrophobic material-supported platinum catalysts. • Concepts of the physical chemistry of polymers in technologies and environment protection. • App
