The timeline in Adobe Animate CC organizes and controls a document's content over time in layers and frames. Like a movie film, Animate documents divide lengths of time into frames. The timeline shows where animation occurs in a document, including frame-by-frame animation, tweened animation, and motion paths. Controls in the layers section of the timeline let you hide, show, lock, or unlock layers, and display layer content as outlines.

Create interesting timeline infographics with the Visme Timeline Maker. Change icons, fonts, and colors. Customize everything in the timeline template to fit your story. Easily embed into your site or share on social media. Customize every aspect of your timeline to fit your story. The timeline maker allows you to edit anything, from the position and size of elements to the color schemes, fonts and backgrounds. Apply a color scheme with one click or create your own.
